

ABSTRACT OF THE DISCLOSURE

A sticker is formed by providing a first adhesive layer 12 on one end side of one face of a sheet piece 11 formed in a substantially square plane shape in a plan view and a second adhesive layer 13 on the other end side of the sheet piece 11. The second adhesive layer 13 is formed at an inward distance of about 15mm or more from the other end of the sheet piece 11 to form a gap S of such a size that the sheet piece 11 can be attached flat on a face AS of an object A to which the sheet piece 11 is to be attached and that the sheet piece 11 can be easily peeled off.
